

Xuan Bian – Medical Director

Brief Bio

With 10+years of professional experience at GE/Pfizer/MSD, expertise covers global R&D, oncology, medical innovation and cross-regional strategy. Core strengths focus on cross-regional resource integration, global-local synergy and evidence-based innovation, supporting high quality development of regional medical affairs.

Cross-Regional Resource Synergy & Academic Ecosystem Development

Established Greater China medical strategy hub, expert system and academic platform. Joined 300+ cross-regional meetings to accelerate product launches, with 45+awards. Initiated international MDT summits across the US, UK, Japan, Korea and China; built 150+ expert network and reached 6,000+ KOLs, forming a solid APAC academic ecosystem.

Full Lifecycle R&D Management & Clinical Experience & Evidence System Construction

Responsible for full lifecycle management of drug R&D and clinical application, with a focus on innovation in medical knowledge management (HEOR, RWE research), innovative drug development, and new product launches. Led or supported 20+ global clinical studies across cardiovascular medicine, lung cancer, abdominal tumors (liver, pancreatic), Alzheimer's disease, osteoporosis, and hepatitis, overseeing protocol design, safety management, and data management for Phase III–IV trials. Contributed to 4 key APAC HCC guidelines and consensus, setting regional clinical standards. Completed 10+ global IST reviews and supported 10+ national/regional projects, establishing a robust clinical evidence framework.

Medical Innovation Practice & Project Delivery

Drove policy-aligned medical innovation, supported NRDL programs, health technology assessment, and evidence building for clinical guidelines. Integrated medical transformation into project design and delivery. Adopted an expert-hospital-institution collaboration model, enabling 33 hospitals to launch innovative therapies. Drove CEUS innovation, pharmacoeconomic research and medical insurance alignment. Led pioneering innovation projects including provincial/municipal CDSS pilots, collaborative themed programs with Xinhuanet, AI facial recognition research in CNS disorders, and smart medical mini-program pilots. Delivered CDSS, AI tools and training programs, optimizing clinical pathways and building cross-regional professional capabilities.

Primary initiatives of current role

As Medical Director, established and delivered a disease-centered global medical strategy roadmap (from Phase III publications in 2018 to guideline inclusion in 2025). Led multi-dimensional initiatives including guideline consensus development, MDT expansion, internal capability training, expert working groups, and China-Japan dual-center training programs. Advanced key HERO/SON studies and provided evidence support for NRDL reimbursement, new product launch, and price maintenance. Developed president forum platforms, optimized clinical QC and standardization, and promoted smart hospital and AI-enabled medical solutions. Delivered outstanding per capita productivity with a lean team, strengthening SNZ's academic leadership in hepatobiliary oncology and CEUS in China.

As SNZ Global Medical Lead (2021–2024), integrated China's medical practices into global strategy; built international platforms to communicate the value of SNZ CEUS via the 1st International Liver Cancer Diagnosis & Treatment Summit; translated local evidence into global regulatory and guideline influence, and shared scalable China best practices to advance global medical transformation.

As Project Lead for the Vision Study, led site selection of 60+ core tier-III hospitals from 100+ tertiary centers; support whole process from set-up to DBL, control time cycle finished within 11 months

Select Education

Fellow of the Royal Society of Medicine (RSM), UK

Senior research Fellow, National AI Institute, USA

Member of the Asian Pacific Association for the Study of the Liver (APASL)

Certified in the Design & Conduct of High-Quality RCT Course by the Centre for Evidence-Based Medicine, University of Nottingham

Nature– Master class participant

Collaborator, Division of Life Sciences, University of Leicester Medical School, UK
Visiting Scholar, Digestive Disease Center, Kindai University

Postdoctoral Researcher, University of Oxford (Research Area: Establishment of Standardized Systems and Key Quality Control Technologies for Organoid-Based Drug Development)

Doctor of Medicine–Research Area: Residual Cardiovascular Risk Assessment and Treatment Strategies for Coronary Heart Disease (CHD)

Doctor of Management–Research Area: Innovation in Training Systems and Management Models for Medical Talents with Diverse Backgrounds under the Trend of Medicine/Engineering Integration and Medicine/Science Convergence

Master of Medicine–Research Area: Bone Marrow Mesenchymal Stem Cell Transfusion for the Treatment of Hepatic Fibrosis

Second Master's Degree–Research Area: International Business and Economics (Bilingual)

Select Certification & Awards

NIDA Certification of GCP–ICH

Stanford Certification of Evaluations for AI Applications

Yale Certification of Introduction to Psychology

EMKT CONSULTING Situation Leadership

BMJ Editor Seminar PROGRAMME participant

GE PDX–MARS program–Nominated to join the “Business Leadership Development Program ” as the sole member from the supporting department.

GE PDX –Recipient of four **General Manager's Awards** and one **President's Award**, along with **21 global /local awards**

MSD R&D– “**Outstanding Contribution Award**” Outstanding performance on clinical study management and gain China **EM/HQ team award**
